Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare
1 hour to collaborate
2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

0 minutes

Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

Open article →

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

0 minutes

PROBLEM
How might we facilitate better communication for specially abled people ?

Key rules of brainstorming
To run a smooth and productive session

Stay in topic.   Encourage wild ideas.

Defer judgment.   Listen to others.

Go for volume.   If possible, be visual.

Brainstorm

Write down any ideas that come to mind that address your problem statement.

0 minutes

TIP
You can select a sticky note and hit the pencil [switch to sketch] icon to start drawing!

TAMILSELVI T

Classification of sign language relate to photos LSTM CNN Communication

employing a camera to capture real-time images that the CNN model can process.

using a dataset containing plenty of photos accompanied by a variety of sign language messages.

the model should be made available as a software application so that more individuals can access it globally.

SAMYUKTHA P V

utilising a natural language processing model to translate spoken language.

converting sign language into a format that is understandable to the general public in terms of reading and

the proposed CNN will be built and deployed more easily thanks to cloud services.

using microphones to listen to and read spoken

SYEDA ANJUM N

Real-time sign detection using a model that can identify gestures based on finger spelling so that each gesture can be combined to produce a full word.

Deep Multi-layered Convolution Neural Network for Sign Language Detection from Hand Gesture Images

translating the skeleton model created from the movements into simple alphabets

using raw data from a low-cost image sensing module to train a neural network for sign detection

JEEVIKA K

Use NLP to transform language used by everyday

to create a system that can translate sign language into audio.

to employ pertinent packages when creating the
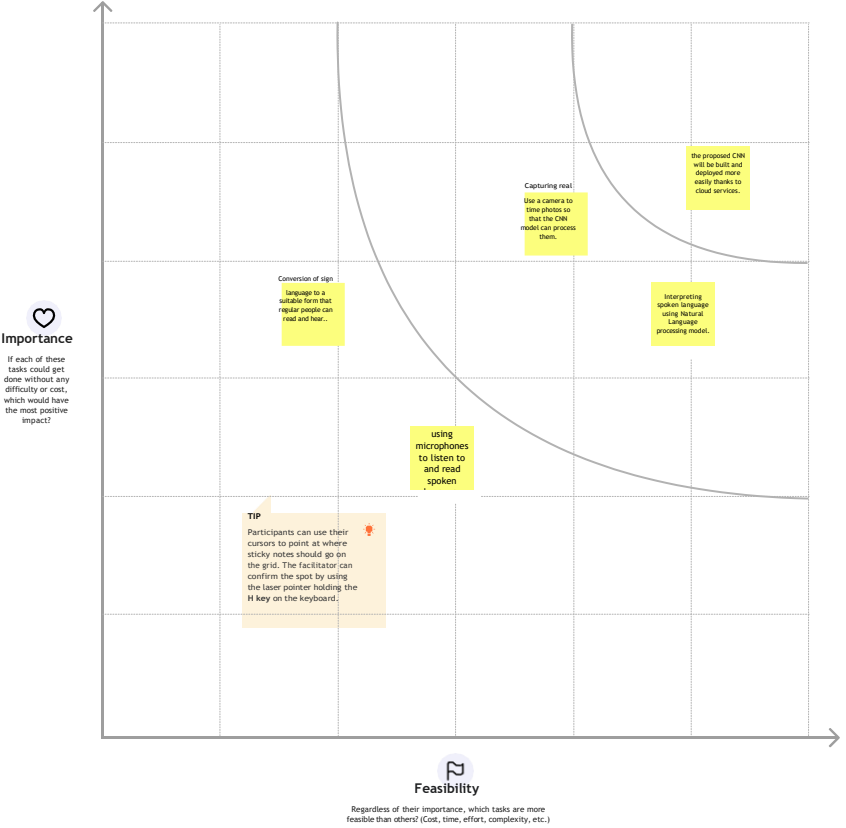

to boost the speech output of average folks.

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go.
In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

0 minutes

Classification of Dataset

LSTM CNN classification of pictures containing sign language interaction.

using a dataset containing plenty of photos accompanied by a variety of sign language messages.

Classification of Dataset

listening to and reading spoken words using microphone

use a camera to record live visuals that the CNN model will process.

Language Processing

use a natural language processing model to translate spoken words.

amplifying the speech output of regular individuals.

converting sign language into a format that is understandable to the general public in terms of reading and listening.

Service and Application

the proposed CNN will be built and deployed more easily thanks to cloud services.

To deploy the model as an application in order to facilitate water access to a larger number of people across the world.

using microphones to listen to and read spoken

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

0 minutes

♡ **Importance**
If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

🚩 **Feasibility**
Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)

Capturing real
Use a camera to time photos so that the CNN model can process them.

the proposed CNN will be built and deployed more easily thanks to cloud services.

Conversion of sign language to a suitable form that regular people can read and hear.

Interpreting spoken language using Natural Language processing model.

using microphones to listen to and read spoken

TIP
Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the H key on the keyboard.

After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

0 minutes

Quick add-ons

Share the mural
Share a view link to the mural with stakeholders to keep them in the loop about the outcomes of the session.

Export the mural
Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save in your drive.

Keep moving forward

Strategy blueprint
Define the components of a new idea or strategy.
